TITLE : DEVICE FOR INDICATING
ON-VEHICLE INFORMATION

ABSTRACT : PROBLEM TO BE SOLVED: To make a driver not feel troublesome about indications, by darkening the indication screen when the driver turns handle to the central side of a vehicle.

SOLUTION: In this vehicle information indication device, a means 12 for detecting advancing direction detects the advancing direction of vehicle, and a means 13 for judging change-over of indication screen judges that the indication screen of a screen indirection means 14 is changed into a condition where the visibility is low when the detected direction is directed toward the central side of the vehicle viewed from the driver's seat and that it is changed into a condition where the visibility is high when the directed direction is directed toward the opposite side of the center of the vehicle. Thus, especially when steering the vehicle to the center side of the vehicle, a driver is made not to feel troublesome about the indication screen of too high visibility.
